Figure 11. Bayesian Updating: P vs T After TUXEDO−2

Figure 11a. Bayesian Updating: P vs T for MACE

Prior: Kutcher 2023 BNMA (HR 0.87, 95%CrI 0.74−1.06)
Likelihood: TUXEDO−2 (Bangalore 2026, HR 0.86, 95%CrI 0.64−1.15)
Posterior: HR 0.87, 95%CrI [0.74, 1.01] | Blue band = ROPE [0.90−1.11]

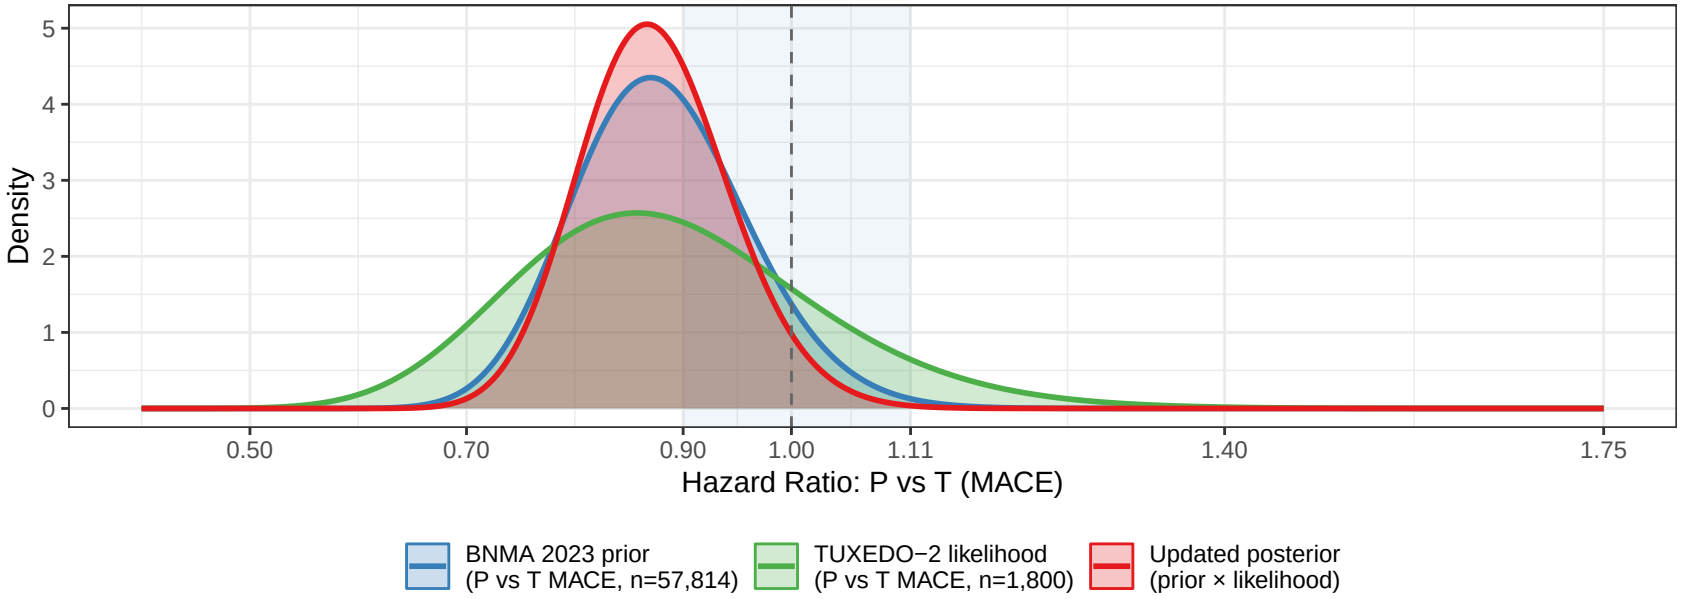

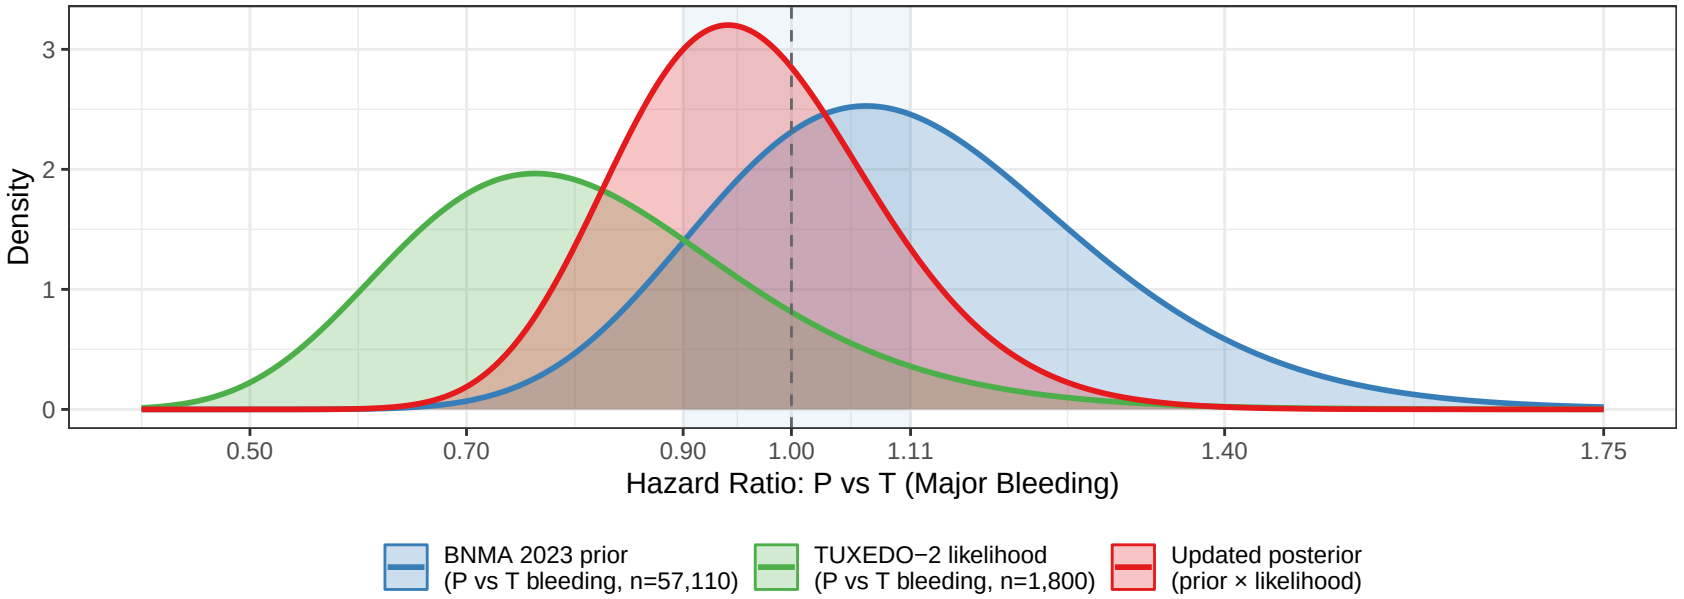

Figure 11b. Bayesian Updating: P vs T for Major Bleeding

Prior: BNMA 2023 derived (HR 1.07, 95%CrI 0.76−1.51)
Likelihood: TUXEDO−2 (Bangalore 2026, HR 0.76, 95%CrI 0.51−1.14)
Posterior: HR 0.94, 95%CrI [0.74, 1.20] | Blue band = ROPE [0.90−1.11]

TUXEDO−2 (Bangalore 2026): diabetes + multivessel PCI, India, n=1,800.
Prior derived from Kutcher 2023 BNMA (17 RCTs, n=57,814).
derived from P vs C and T vs C BNMA posteriors; TUXEDO−2 population (100% diabetes, 85% triple−vessel) may not generalise to the broader ACS population.
